

PDF SEAL

This sample document ships with pdf-seal to power the in-app Help tour. pdf-seal is a browser-based tool for preparing PDF documents with signature form fields — upload a document, place and customize fields, edit metadata, and share the result for signing, all without leaving the browser.

1. About This Sample

This document has three real revisions: an initial draft, one with signature fields added, and one with a completed signature — so the Revisions panel has genuine history to walk through.

2. Turnaround

Turnaround: 14 days

Reviewers are asked to return a signed copy within the period stated above, measured from when the document is shared.

3. Field Placement

pdf-seal places signature, text, and date fields directly onto the page at the coordinates chosen in the editor, shown below.

4. Sign-off
